log4j에 Root Logger를 trace로 바꾸면 에러코드가

```
https://docs.oracle.com/error-help/db/ora-00928/]을(를) 발생시켰습니다.
Error : 928, Position : 31, SQL = INSERT INTO customer
                VALUED (:1 , :2 , :3 , :4 ), Original SQL = INSERT INTO customer
                VALUED (?, ?, ?, ?), Error Message = ORA-00928: missing SELECT keyword
```

위에서

```
https://docs.oracle.com/error-help/db/ora-12899/
### The error may exist in mybatis/customer.xml
### The error may involve defaultParameterMap
### The error occurred while setting parameters
### SQL: INSERT INTO customer   VALUES (?, ?, ?, ?)
### Cause: java.sql.SQLException: ORA-12899: value too large for column "MADANG"."CUSTOMER"."PHONE

https://docs.oracle.com/error-help/db/ora-12899/
; uncategorized SQLException for SQL []; SQL state [72000]; error code [12899]; ORA-12899: value

https://docs.oracle.com/error-help/db/ora-12899/; nested exception is java.sql.SQLException: ORA-

https://docs.oracle.com/error-help/db/ora-12899/]을(를) 발생시켰습니다.
Error : 12899, Position : 47, SQL = INSERT INTO customer
               VALUES (:1 , :2 , :3 , :4 ), Original SQL = INSERT INTO customer
               VALUES (?, ?, ?, ?), Error Message = ORA-12899: value too large for column "MADANG
```

아래와 같은 형식으로 바뀐다. (다른 오류지만 어떤 변화가 있는지 참고 자료)
